

Propane Forklift Safety

Propane cylinder exchange is the safest and most efficient way to keep your propane forklifts running. Our professionally trained staff can provide propane forklift safety training classes for your employees. To save you time and keep your facility safe Forklift Propane ensures:

- Cylinders are inspected each time they are returned to our facility for refill
- No liquid transferred on your premises
- · Damaged cylinders removed from service
- · Leaky valves repaired or replaced
- O-Rings replaced as needed
- Safety training for your employees
- Procedures meet and exceed insurance/OSHA standards

Propane Handling Safety Tips

- Do not smoke while handling propane cylinders.
- If you detect a leak, shut off valves and place cylinder outside.
- Contact your propane provider to repair or replace propane tank.
- Always, wear proper eye protection and gloves when handling propane cylinders.
- When not in use always close all propane valves.
- Store all cylinders in safety storage racks away from any source of ignition or extreme heat.
- Always read warning labels attached to propane cylinders.
- Direct contact with propane will cause freeze burns to skin.
- Remember, propane is a hazardous material, treat it with respect!
